## **DETAILED ACTION**

## Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-22 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The operating conditions of the process critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See In re Mayhew, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976).

As disclosed in the present specification, for example, in order to produce a product containing less than about 5 ppm total aluminum, at a LHSV greater than or equal 2, the operating temperature must be at 675° F (see Table I and II).

Claims 1-22 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling a process for producing a product comprising less than about 5 ppm or less than 1 ppm of total aluminum only when a certain operating conditions are met, does not reasonably provide enablement for a process producing a product comprising less than about 5 ppm or less than 1 ppm of total aluminum all operating conditions. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims. For example, in order for the process producing a product containing less than about 5 ppm of aluminum, the process must be operated at a LHSV of greater than or equal 2 and the operating temperature must be at 675° F. Not all the operating conditions would provide the claimed amount of

aluminum which is not enable by the specification and undue experimentation would be required to determined other operating conditions (e.g., LHSV =5 or 0.5 and temperature = 750° F or 450° F) that are effective in the claimed process to produce the claimed amount of aluminum.

## **Conclusion**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tam M. Nguyen whose telephone number is (571) 272-1452. The examiner can normally be reached on Monday through Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn Caldarola can be reached on (571) 272-1444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
